Describe the rationale used in the application of overage / underage:					
<p>In 2015 the underharvest for the EU in 2015 was of 400.38 t, which is less than the maximum allowed 30% provided in Rec 15-03. Therefore, the IS is entitled to carry over 400.38t to 2017.</p> <p>However, the adjusted limit for 2017 has not been calculated pending a decision on the 2017 TAC at the annual meeting.</p>

In 2014 the EU exceeded its white marlin quota by 52.21 tons.
The EU proposed a pay-back over 2 years of such overharvest, which corresponds to a quota of 23.9 t in both 2016 and 2017.
In 2015 the quota was again exceeded, this time by 67.19 t.
The EU proposes a pay-back of this overharvest over 3 years in 2018, 2019, 2020, which corresponds to 22.4 t per year.

DETAILS DES CALCULS

Espadon du Nord :

$$\begin{aligned} \text{Limite de capture de 2015} &= \text{solde 2014} + (35\% \text{ du solde 2014}) \\ 588,8 &= 436,21 + (0,35 \times 436,21) : \text{report sous- consommation 35\%} \\ 588,8 &= 436,21 + 152,67 \\ 588,8 &= 588,8 \end{aligned}$$

Espadon du Sud :

$$\begin{aligned} \text{Limite de capture de 2015} &= \text{solde 2014} + (35\% \text{ du solde 2014}) \\ 482,52 &= 357,42 + (0,35 \times 357,42) : \text{report sous- consommation 35\%} \\ 482,52 &= 357,42 + 125,67 \\ 482,52 &= 482,52 \end{aligned}$$

Le même mode de calcul a été utilisé pour la limite de capture de 2016 de l’espadon nord et du sud, à savoir la multiplication par le taux de report de la sous consommation arrêté à 35% par le solde de l’année 2015.
NB : Les calculs ont été faits compte non tenu des tableaux adoptés en novembre 2015.

Describe the rationale used in the application of overage / underage: The 2014 underage is greater than the maximum amount that can be carried over ($\leq 50\%$ of original catch limit); hence the amount carried over is 62.5 t (0.5×125). Additionally, 75 t were transferred to Belize; hence 75 is subtracted from the original adjusted limit to arrive at the final adjusted limit of 112.5 t.
