

**RESOLUTION BY ICCAT ON COOPERATION WITH THE
CONVENTION ON INTERNATIONAL TRADE IN ENDANGERED
SPECIES OF WILD FAUNA AND FLORA (CITES)**

(Transmitted to Contracting Parties: **November 30, 1993**)

WHEREAS, among the objectives of the International Commission for the Conservation of Atlantic Tunas is to ensure the effective conservation and rational management of tuna and tuna-like fishes in the Atlantic Ocean, including the adjacent seas;

RECALLING that international trade in threatened and endangered species, including marine species, is under the purview of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES);

NOTING that Article XV, paragraph 2.b of the CITES Convention requires the Secretariat, when it receives a proposal for an amendment to the Appendices on marine species, to consult inter-governmental bodies having a function in relation to those species especially with a view to obtaining scientific data these bodies may be able to provide and to ensuring coordination with any conservation measures enforced by such bodies;

NOTING the provisions of the Draft Resolution contained in the Notification to the Parties of CITES No. 773 of October 15, 1993, which states in particular that the views of inter-governmental organizations with competence for the management of the species concerned should be taken fully into account;

NOTING that Appendix 6 of the above Draft Resolution would require proponents, when preparing proposals to amend the Appendices relating to marine species, to consult in advance with the competent inter-governmental organizations responsible for the conservation and management of the species, and to take their views fully into account;

CONSIDERING that marine fishery resources constitute one of the valuable food sources of humankind, and that their importance will become even greater in the future.

ENDORsing the Declaration of the International Conference on Responsible Fishing (Cancún, May 1992), in virtue of which States recognize that policy for the protection of the environment should encompass the fundamental causes of the degradation of the environment, in order to avoid that the measures adopted do not involve useless restrictions in trade matters.

ENDORsing the concept of sustainable utilization of resources, agreed at the United Nations Conference on Environment and Development (UNCED) in 1992;

**THE INTERNATIONAL COMMISSION FOR THE CONSERVATION
OF ATLANTIC TUNAS (ICCAT):**

- a REQUESTS that the Parties of CITES consult fully with ICCAT in reaching conclusions on proposals for listing any of the relevant marine species, and for the revision of the criteria for listing species on the CITES Appendices;
- b REAFFIRMS its intention to provide CITES with a report on the status of the Bluefin Tuna populations, and on related conservation initiatives;
- c EXPRESSES its wish that the management measures undertaken by ICCAT and the information provided will be taken fully into account by CITES.
