										<p>regulations. Given the country's need to more tightly manage capacity in other fisheries, displaced and new fishing capacity will be encouraged to enter the fishery for highly migratory species, including northern swordfish. The Government of Trinidad and Tobago is receiving TCP support from the FAO to strengthen its national legislative framework to effectively discharge the country's international obligations as a coastal, flag, port and market State under UNCLOS, the UN Fish Stocks Agreement, ICCAT Recommendations, the Compliance Agreement and the PSMA. Project outputs expected in December 2018 include a final Draft Fisheries Management Bill and final Draft NPOA-IUU Fishing. The Government is also receiving FAO support under several projects to: 1) enhance national capacity in data collection and processing and 2) to develop a national strategy and action plan to fulfill the requirements of the Port State Measures Agreement and related international and regional instruments</p>
